

Introducing...

SISE-net Operation Information Sharing Hub

**A collaborative information hub for simplifying crisis coordination
between states and the private sector powered by a national community**

Benefits

- **Single Point Access** - A one-stop shop for validated operational information and resources.
- **Sync's Situational Awareness** - Gets industry and government on the same page in six areas during disasters.
- **Cross-Sector Collaboration** - Industry and government experts work together.
- **Data Reliability** - Information ranked using the ORL standard for ranking data confidence.
- **Comprehensive Data Collection** - Collects emails, attachments, texts, pics, approved social media posts, and more.
- **Reduced Email Traffic** - Minimizes email confusion and communication chaos.
- **FOIA Protection** - Ensures privacy from non-operational users.
- **Private** - Available only to a vetted community. Not publicly accessible.

Purpose

To sync and simplify communications across all sectors and states before, during, and after a hurricane or crisis.

Overview

Developed in 2020, the SISE-Net Hub is a system that helps industry and state governments work together more smoothly during disasters. It connects them and synchronizes their situational awareness about what's happening in impacted areas in six specific areas, helping them coordinate their efforts to reduce confusion and delays, which saves lives and property.

How It Works

The SISE-net Hub is the technology part of a larger year-round, cross-sector planning and exercise framework supported by industry. The SISE-net community sustains cross-sector planning and exercises between states and industry stakeholders to identify and solve shared operational problems.

- **Planning** - Weekly and monthly planning meetings conducted by working groups.
- **Exercises** - Annual cross-sector virtual exercises held by the SISE-net community and its working groups.
- **Disaster Response** - The SISE-net community accesses trusted and vetted crowdsourced information and data feeds.
- **The Hub** is where unstructured crowdsourced information is converted to GIS format, which can be validated, shared faster, and protected better than emails.

New users register with SISE-net and immediately gain access to the SISE-net Hub via a web browser on any device.

Who We Are

The All Hazards Consortium (AHC) is a 501c3 non-profit organization serving the public-private interest since 2005. The AHC focuses on improving public/private planning and operational information sharing to get businesses and communities back to business faster following disruptions and disasters.

SISE-net Information

- State/Federal:**
 - Declarations/Executive Orders
 - Waivers, Closures, Shelters, Evacuations
 - State Guidance & Updates
- Private Sector:**
 - Facility operational status
 - Infrastructure disruptions
 - Information requests
- National Data Feeds:**
 - Live nation traffic, power outages, facility open/closed, weather, and weather impacts
- Partner Links:**
 - Links to SISE-net partner organizations and online resources to support partner building
- SISE-net Operations Directory:**
 - A managed nationwide operational directory of vetted government and industry people.

Cross-Sector Approach

- **Broadens** your situational awareness across all sectors
- **Creates awareness** of cross-sector risks and inter-dependencies between organizations
- **Attracts new information** sources and people to solve problems jointly
- **Builds partnerships** through SISE-net's ongoing planning and exercise framework and operational tools
- **Identifies opportunities** for projects and investments to solve joint operational problems
